realize the limitations of his own medical knowledge and so recommend that his patient seek medical care in the hospital.

Besides these hospitals, the government has established a clinic or public health center in each district. The center in Pu Yen Hsiang has usually been understaffed or lacking a doctor entirely for long periods of time thus making it impossible for villagers to be sure they can obtain treatment at the center. The result has been that since some villagers wasted time going to the center without receiving treatment, most have come to ignore it completely.

The advent of modern drugs has also helped improve health conditions in the local area. Western-style doctors practicing in the area utilize a great many drugs in treating illness. Penicillin is now so plentiful and inexpensive that most of them are almost automatically expected to administer the drug to their patients. Indeed, the drug has become so well known in recent years and is so readily obtainable in Lukang drug stores that it is not unusual for ordinary villagers to buy it and administer it with a hypodermic needle to their own family members or, more often, to a sick pig. The drug stores in Lukang and other towns and cities which sell penicillin and other Western drugs also usually have a counter in the shop which features Chinese herbal and root medicines. These are still used by many Taiwanese as well as mainlanders.

In addition to the drugs or antibiotics, village families keep various kinds of Western-style patent medicines in the house for treating stomach upsets, headaches, colds, backaches, and so on. These are left with them on consignment by traveling medicine merchants. The medicines are separately wrapped and placed in a kit or bag, and every few months the peddler comes through the village, examines the contents of each bag, collects for what medicine has been used, and replenishes the supply. Many village families have several medicine bags on hand, each supplied by a different company.

A few times a year medicine shows featuring music, comedians, and even snake charmers, also visit the villages in the area. The companies which sponsor these shows sell two or three medicines for special illnesses. Such groups usually draw great village crowds, and their sales are large.

However, in spite of all the improved medical facilities available and the somewhat better sanitation practiced in the local area, there is a high prevalence of disease. Skin diseases are common, especially among children, and intestinal parasites plague both young and old. Trachoma is not uncommon, but the villagers do little to counter it. The disease usually strikes older villagers who are unwilling to spend the time and money necessary to obtain proper treatment. One trachoma victim, a woman of about forty, stated that although she

including a bottle works and a packing plant; and at about the same time a flour mill was built in nearby Shantzuchiao. More recently, a drug factory employing nearly a hundred people was built in Hsulin, and since the war a textile industry has developed in the market town of Panchiao. Although there are still not enough positions for all those seeking employment, these developments have at least created for some village men the possibility for something other than an agricultural income.

At about the same time as these new resources were developing, the need for something other than an income from agriculture was becoming pressing in Hsiachichou. Within thirty years of their occupation of Taiwan, the Japanese colonial government introduced a broad and highly effective medical program with the inevitable result that the infant mortality rate over the succeeding twenty years fell dramatically. Thus while new opportunities for employment were being created the future work force was increasing at a rapid rate. Even then, however, these developments would not have had a substantial effect upon the village had it not been for one further change. To work in the drug factories or the textile mill at least a minimum of education is required, and without such education the villagers might never have been able to compete with more urban dwellers for employment opportunities. Fortunately an elementary school was established in Chichou in the first decade of this century, so that by the time the shift in economy took place the majority of the male villagers were at least literate.

Peihotien

Not all of the people in Peihotien have seen ghosts and certainly 775
not all of them believe in ghosts, but there is not a perfect correlation between a man's belief in ghosts and his level of sophistication in other matters. One of my favorite scoffers in the village is a no-nonsense woman about fifty years old. After listening to some men tell me about the habits of ghosts, she laughed and told me what she thought about ghosts. "I'm always walking around at night and I've never once seen a ghost. When I used to gamble, I wandered around even more at night. I would go all the way to Nanhotien to gamble, come back at midnight for more money, and walk all the way back again. I never met a ghost or even worried about one. Remember where old Ong hung himself on that tree behind their house? Just a few days after his suicide we were gambling at Tan's house. A policeman came and we all had to run and the only way was under that tree. None of us held back. If there was a ghost there, it would been trampled to death we were running so fast. When you are gambling you aren't afraid of the King of Hell. How could you be afraid of a ghost?"

Considering the affinity of ghosts for isolated spots, it seems 361
unlikely that many could stick it out for long in Peihotien. There is 311
very little land within the village that isn't tamed by houses or pig pens or kitchen gardens. Unused land is more or less public property and is crossed and recrossed by dozens of people each day. The square directly behind the house in which we lived is a good example. It is flanked on three sides by houses and on the fourth by the main path through the village. A family who supplements their income by [434]
making noodles has set up stretching racks in one corner. Years of use has made the surface of the square as hard and smooth as concrete, ideal for a drying ground. During certain seasons its entire upper half [251]
is carpeted with fat rice grains which are turned every few hours for uniform drying. Since the square is public, the families who use it must [235]
keep a child stationed there to drive off stray chickens and ducks. Two or 443
three times each summer traveling medicine peddlers set up their make-shift stages in the square, give free performances, and then try to sell [278]
their wares to the crowds they attract. Sometimes their acts are elaborated by costumes and a squawking loudspeaker; more often they are simple, lighted by a single electric globe rented from one of the families on the square. During the day a peddler may cycle into the village and spread out his merchandise in the square. The women often do not buy anything and leave the poor peddler to fold his goods back into his box and pedal off to the next village.
